Dekati® ELPI+™

- Real-time particle size distribution
- Wide particle size range
- Wide range of applications
Dekati’s Electrical Low Pressure Impactor, the ELPI+™, is a new, improved version of the widely used and well-characterized ELPI™ system. ELPI+™ enables measurement of real-time particle size distribution and concentration in the size range of 6 nm - 10 μm with 10 Hz sampling rate. The ELPI+™ features include real-time stand-alone operation, wide sample concentration range, wide particle size range and robust structure for operation even in harsh conditions. The use of impactor technology enables post-measurement chemical analysis of size classified particles. In addition, the ELPI+™ can be used for real-time particle charge distribution and gravimetric impactor measurements. The size resolution of the ELPI+™ can be increased to 100/500 size channels with data inversion available in the High Resolution ELPI+™ software. The ELPI+™ can also be upgraded into the High Temperature ELPI+™ which allows direct sampling of hot aerosol up to 180 °C. All these features enable the use of the ELPI+™ instrument in wide range of particle measurement applications.

Operating principle
The ELPI+™ operating principle can be divided into three major parts: particle charging, size classification in a cascade impactor and electrical detection with sensitive electrometers. The particles are first charged into a known charge level in the corona charger. After charging, the particles enter a cascade low pressure impactor with 14 electrically insulated collection stages. The particles are collected in the different impactor stages according to their aerodynamic diameter, and the electric charge carried by particles into each impactor stage is measured in real-time by sensitive electrometers. This measured current signal is directly proportional to particle number concentration and size, thus the ELPI+™ gives particle number concentration and size distribution in real-time. By switching the charger unit off, the ELPI+™ can be used for particle charge distribution measurements.

ELPI+™ display shows particle size distribution in real-time.
Excellence in Particle Measurements

Real-time particle size distribution and total concentration measurements
- Wide particle size range; 6 nm-10 μm
- 14 size fractions (up to 500 size fractions with the High Resolution ELPI+™ software)
- Real-time (10 Hz) data on particle number, active surface and mass concentration
- Possibility of post-measurement chemical characterization of size classified impactor samples
- Automated particle charge size distribution measurements
- Wide operational concentration range
- Simple and robust construction
- Insensitivity to variations in sample pressure
- Sampling from up to 180 °C with the High Temperature ELPI+™
- Sophisticated calibration made for each manufactured unit
- Integrated flow control and pressure adjustment
- Independent stand-alone operation or control via laptop using ELPI+VI software
- Large 7” display with graphic user interface
- 6 analogue inputs, 3 outputs

Typical applications for the ELPI+™ include:
- Combustion studies
- Outdoor and indoor air quality measurements
- Occupational health studies
- Automotive exhaust measurements
- Blow-by gas measurements
- Pharmaceutical inhaler studies
- Particle charge distribution measurements
- Filter grade efficiency studies
- Nanoparticle measurement

ELPI+™ Applications

The ELPI+™ is suitable for various different types of measurement applications where the requirements for the instrument include wide particle size range and fast response time. Together with Dekati® Sample Conditioning instruments, Dekati is able to provide complete measurement solutions for many different types of applications.

ELPI+™ Features

ELPI+ Accessories

- Aluminium and polycarbonate impactor collection foils, 25 mm
- Collection substrate spray (DS-515) with a stencil (DS-125)
- Vacuum pumps
- Spare impactors and collection plate sets
- Sintered collection plate sets for high concentration measurements
- High Resolution ELPI+™ software for improved particle size resolution
- High Temperature ELPI+™ for direct hot aerosol sampling
- Dekati® Dilution Systems for conditioning sample from combustion flue gas and automotive exhaust
- Dekati® Dryer (DD-600) for removing water from ambient aerosol
- Sample inlets for air quality measurements

ELPI+VI software can be used for instrument control

Dekati Ltd. is specialized in the design and manufacture of innovative fine particle measuring and sampling devices. Since its founding in 1994, Dekati has become the technological market leader in producing fine particle measurement instrumentation for various applications and thousands of customers.
